**Dairy:** Plain yogurt (good with fresh fruit), cheese & cheese spread.

**Cereals:** Shredded Wheat, Weetabix, Bran Flakes, Cornflakes, Special K and Shreddies. (Do not add sugar).

**Drinks:** Still water (not fizzy) is good between meals. So is plain milk. Keep any other drinks to mealtimes. Even the ‘no added sugar’, low sugar or natural sugar drinks can still decay teeth.

**Read food labels**
The kinds of sugar to avoid are on labels as glucose, fructose, maltose, sucrose, maltodextrin and honey. Try to keep these to mealtimes.

**Sugar free medicines**
Unfortunately some medicines contain sugar, which can cause tooth decay if given frequently for long periods of time.

Check with your doctor or pharmacist to see if a sugar-free alternative is available.

If possible, give medicines at mealtimes and not last thing at night.

**Visit your dentist regularly**
It is important for you and your child to visit your dentist at least once a year. They will check your teeth and gums to make sure they are healthy.

To find a local NHS dentist, call 0845 002 0034 or email devondentalhelpline@nhs.net

**Useful contact**

Introduction
This leaflet aims to provide basic information about how to look after your children’s teeth and help prevent decay.

Cause of decay
Tooth decay occurs when bacteria in the mouth break down sugar to cause an acid attack, which then dissolves the teeth.

\[
\text{sugar + bacteria (plaque) = acid} \\
\text{acid + enamel + number of acid attacks = decay}
\]

How often you have sugar can affect how much decay you may have.

Brushing your teeth with a fluoride toothpaste can protect your teeth.

Choose the right fluoride toothpaste
Children aged 0-3 years should use a toothpaste containing at least 1000 ppm of fluoride but use only a smear on the brush.

Children over 3 years should use a pea-sized amount of family toothpaste which should contain 1350-1500 ppm of fluoride. This will be marked on the tube.

Do not let your child eat toothpaste.

Toothbrushing
Help your child brush their teeth until they are at least 8 years old.

When brushing, make sure you brush the teeth right up to the gums.

Once over 8 years old you still need to check they are brushing their teeth.

Choose a small headed toothbrush no bigger than a pound coin.

Do not wet the toothbrush before cleaning as this dilutes the toothpaste.

Children should spit out and not rinse after brushing. Leaving the fluoride toothpaste in the saliva can help strengthen teeth.

Gums can bleed during brushing, due to plaque being present. Do not stop brushing.

Make sure you brush twice a day for 2-3 minutes.

Brush last thing at night and one other time during the day for 2-3 minutes with a fluoride toothpaste. Brushing last thing at night can help protect the teeth as fluoride in the toothpaste continues to work when they are asleep.

Replace your child’s toothbrush when it shows signs of wear or every three months.

Do not share toothbrushes.

Snacks and drinks
Lots of sugar in our diet comes from biscuits, cakes, sweets, chocolate, drinks and breakfast cereals.

Sugary foods and drinks between meals can damage teeth, try to keep these to mealtimes only.

Some safe snack ideas
Bread: Toast, crumpets, pitta bread, baps & muffins.

Fruit: apples, pears, bananas, grapes, kiwis, strawberries, blueberries, & lots more. Be very careful with dried fruit as they are very sugary; keep them to meals.

Vegetables: Celery, carrot, cucumber, peppers & lots more.
